UGL awarded \$136 million power systems project

Sydney: UGL Limited (ASX: UGL) today announced it has been awarded a new \$136 million contract by Alinta Energy to design, procure and construct the Newman to Roy Hill High Voltage Power System, stage one of Alinta's East Pilbara Link Project. Alinta Energy holds a long term Power Purchase Agreement with the Roy Hill Project to supply all required electrical power for the Roy Hill Iron Ore (RHIO) Mine.

The project scope includes the concept development, design, construction, testing and commissioning of:

- 120km of 220kV single circuit transmission line between the Newman Power Station and RHIO Mine
- a 66/220kV substation and associated 66kV connecting works at Newman
- a 220/33kV substation at RHIO Mine
- a 6MW reciprocating diesel engine Power Station at RHIO Mine
- a 33kV electrical distribution system at RHIO Mine.

Early works have already commenced on the project with completion expected in March 2015.

UGL Managing Director and CEO, Richard Leupen, said: "This project is a significant win for UGL's Power Systems business and reflects our reputation as one of Australia's leading power systems contractors and developers of high voltage power infrastructure. We look forward to working with Alinta Energy to successfully deliver this important project and supporting the company as it continues to expand its power generation and transmission presence in Western Australia.

"Across the infrastructure sector, we are encouraged by improving levels of activity with strong growth in UGL's tendering pipeline, particularly in power, transport systems and rail infrastructure projects. UGL is well positioned to benefit from this increased momentum as new projects commence."

"UGL's specialised expertise in substation and high-voltage transmission line construction will complement Alinta Energy's strong record providing reliable power and system security in the Pilbara," said Ken Woolley, Executive Director, Power Generation. "Alinta looks forward to construction of the transmission line, which is an important milestone for Alinta's future in the Pilbara region, including its contract to supply power to the Roy Hill Mine."
